The installer for Java JRE 8 Update 161 does not run on Windows XP. It seems to be a bug with the installer, because the previous Update 152 installs without a problem. Your feedback and/or a workaround would be greatly appreciated. Using this on a legacy system and would prefer a working version of 161; I am sticking with 152 for now unless a fix is found.

Windows XP

Service Pack 3 with all updates including Internet Explorer 8.
